start deploy

On Site:
scan code

FLAGSTACK – capture the flag...

Aufkleber (Laserdruck)

Print codes with a laser printer on a high-quality A4 self-adhesive film (suitable for laser printing).

You can easily get 30 good codes on one A4 page. Now just cut out and the codes are ready for use.

Advantage
Very low cost

Very easy to use

Easy to replace

Disadvantage
Depending on where it is used, the sticker can fade quickly

Lifespan max. 2-3 years

Laminierte Ausdrucke

Print codes on A4 paper (laser / inkjet) and cut out individually.

Place codes individually in the laminating film and ensure that there is sufficient distance (approx. 1 cm) from one another → important for a weatherproof seal.

When you then cut, make sure that there is always enough margin to the code (at least 5mm).

Now the codes are weatherproof and can be used (including double-sided adhesive tape, magnet, glue, Velcro ...)

Advantage
Less maintenance required → longer lifespan than "homemade" stickers
Laser printer not absolutely necessary

Disadvantage
More time required to create

More equipment (laminator) required

On-site assembly may be more complex

Etikettendrucker

Create the layout of the labels with the associated software (codes and, if necessary, instructions).

Print out labels on suitable material. Tape with integrated lamination is best

The codes are ready to use.

Advantage
Less maintenance required → longer lifespan than "homemade" stickers

Very easy to use

Easy to replace

Disadvantage
More equipment (label printer) required

Pro-Tip:
Always print 2 or more copies, it will reduce maintenance costs and time.
